EVERLAST®

Advanced Composite Siding

Make A Lasting Impression

EVERLAST®

Advanced Composite Siding

Designer-Curated Colors in Popular Profiles

Traditional clapboard siding has never gone out of style. Everlast lap siding is available in two reveal widths so your home will reflect classic style and luxury for decades. Or, choose Everlast Board & Batten to give your home a rustic, yet contemporary appeal.

Both profiles can be used exclusively or combined to give your home a special, personal touch, and can be used in conjunction with Everlast's Color Matched trim. Furthermore, the Everlast siding color palette includes deep, rich hues that have been thoughtfully curated by color consultants to complement any style of home, regional preference, and current and classic color trends.

Curb Appeal

Imagine your home beautifully clad in natural cedar, but with none of the hassle and maintenance costs associate with real wood, engineered wood, or fiber cement. Envision never having to paint your home again. Visualize your siding decades from now, remaining as pristine as the day it was installed.

That's Everlast Advanced Composite Siding.

Proven Durability

Since 2009, Everlast siding has been installed on hundreds of homes, multi-family, and light commercial buildings throughout North America.

Everlast siding performs precisely as science and accelerated weather testing predict – beautifully. Homeowners can be confident that Everlast siding is the last siding they will ever purchase.

Peace of Mind

With a siding system as superior as Everlast, it's easy to understand why it's backed by the industry's best, most comprehensive, residential siding limited lifetime warranty that includes fade protection.

Between it's beautiful aesthetics, increased curb appeal, and reduced care and maintenance cost, homeowners can enjoy the ultimate peace of mind, knowing that their siding will look just as beautiful as the day it was installed, year after year, decade after decade.

Best Overall Value

Everlast siding features advanced material science. It features a composite substrate molecularly fused to UV-resistant acrylic capstock – enhanced with an embossed natural woodgrain pattern.

Proven benefits:

-  Eliminates the need for painting
-  Outstanding fade protection
-  Virtually impervious to water
-  No rotting, warping, or splitting
-  Superior impact resistance
-  Insect-resistant
-  Withstands high wind loads
-  Suitable for any environment

Environmentally Responsible

Everlast siding is manufactured with vastly lower energy consumption compared to other siding products. Wood and engineered wood siding contribute to the depletion of vital forestry resources. Plus, Everlast siding permanently eliminates the need for paints, stains, caulking, and solvents which contain harmful chemicals and compounds. And, at the end of its extremely long service life, Everlast siding and trims are fully recyclable, making it a far more sensible choice for the planet.
